- 知识图谱查询
- 知识图谱反问

知识图谱构建

知识图谱构建—DB转RDF

➤ 原始数据库

1. 有四张表，包含一张关系表
2. Department与employee建立关系，通过关系表，organization没有与Employee建立关系

知识图谱构建—DB转RDF

➤ RDF数据

● D2R

1. 生成映射文件
2. 将虚拟RDF转成物理RDF
3. 可以进行可视化浏览（网页）
4. 与Jena Api 结合，进行查询

Tools
D2R Server
<code>generate-mapping</code>
<code>d2r-query</code>
<code>dump-rdf</code>
D2RQ + Jena API

Property	Value
vocab:eps_emp_dept	<http://localhost:2020/resource/eps_department/1038032>
vocab:eps_employee_APP_ID	1
vocab:eps_employee_AVAILABLE	0
vocab:eps_employee_CODE	001
vocab:eps_employee_CREATE_DATE	2014-02-24 15:34:27
vocab:eps_employee_CREATE_USER_ID	1
vocab:eps_employee_DEPT_ID	1038032
vocab:eps_employee_EMAIL	zhangsar@00.com
vocab:eps_employee_FLAG	1
vocab:eps_employee_ID	1038035
vocab:eps_employee_MARITAL_STATUS	1
vocab:eps_employee_NAME	张三
vocab:eps_employee_ORG_ID	1038030
vocab:eps_employee_SEX	1
vocab:eps_employee_TYPE	official
rdfs:label	eps_employee #1038035
rdf:type	vocab:eps_employee

employee

Property	Value
vocab:eps_organization_APP_ID	1
vocab:eps_organization_CODE	test
vocab:eps_organization_CREATE_DATE	2014-05-30 10:34:12
vocab:eps_organization_CREATE_USER_ID	1
vocab:eps_organization_DESCRIPTION	测试机构
vocab:eps_organization_FLAG	1
vocab:eps_organization_ID	2120

vocab:eps_organization_NAME_EN	test
vocab:eps_organization_ORDERBY	5 (xsd:decimal)
vocab:eps_organization_ORG_CODE	test
vocab:eps_organization_ORG_INDEX	-1,2120
vocab:eps_organization_ORG_LEVEL	1 (xsd:decimal)
vocab:eps_organization_PARENT_ID	-1
vocab:eps_organization_SHORT_NAME	测试机构
rdfs:label	eps_organization #2120
rdf:type	vocab:eps_organization

organization

Property	Value
vocab:eps_department_APP_ID	1
vocab:eps_department_CODE	SXXGKC
vocab:eps_department_CREATE_DATE	2014-02-24 15:16:36
vocab:eps_department_CREATE_USER_ID	1
vocab:eps_department_DEPT_INDEX	-1,1038032
vocab:eps_department_DEPT_LEVEL	1 (xsd:decimal)
vocab:eps_department_FLAG	1
vocab:eps_department_ID	1038032
vocab:eps_department_LEAF	1
vocab:eps_department_NAME	省信息公开处
vocab:eps_department_NAME_EN	由32个以内的英文字母组成
vocab:eps_department_ORDERBY	1 (xsd:decimal)
vocab:eps_department_ORG_ID	1038030
vocab:eps_department_PARENT_ID	-1
is vocab:eps_emp_dept of	<http://localhost:2020/resource/eps_employee/1038035>
is vocab:eps_emp_dept of	<http://localhost:2020/resource/eps_employee/1038036>
is vocab:eps_emp_dept of	<http://localhost:2020/resource/eps_employee/1038037>
is vocab:eps_emp_dept of	<http://localhost:2020/resource/eps_employee/1038050>
rdfs:label	eps_department #1038032
rdf:type	vocab:eps_department

department

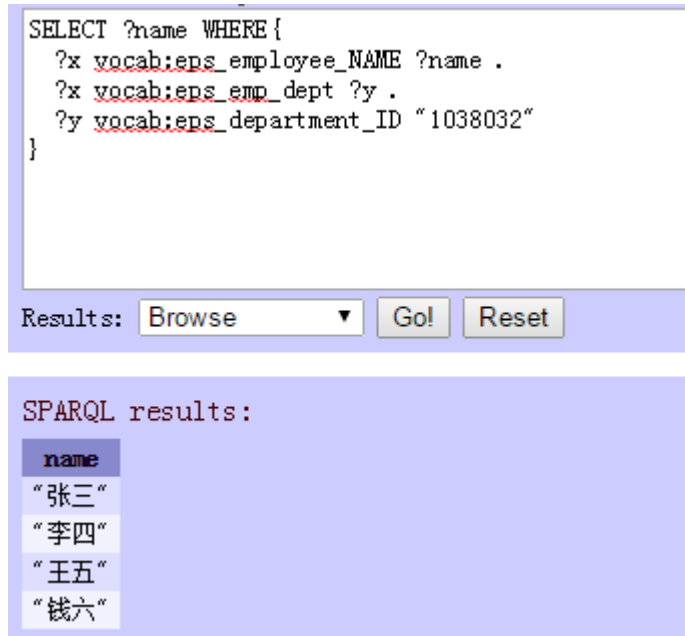

一切为了用户体验!

知识图谱构建—DB转RDF

➤ RDF数据

● Sparql查询

```
SELECT ?name WHERE{  
  ?x vocab:eps_employee_NAME ?name .  
  ?x vocab:eps_emp_dept ?y .  
  ?y vocab:eps_department_ID "1038032"  
}
```

The screenshot shows a SPARQL query interface. The query is: `SELECT ?name WHERE { ?x vocab:eps_employee_NAME ?name . ?x vocab:eps_emp_dept ?y . ?y vocab:eps_department_ID "1038032" }`. Below the query is a "Results:" section with a "Browse" dropdown, "Go!" and "Reset" buttons. The results are displayed as a table with a header "name" and four rows of names: "张三", "李四", "王五", and "钱六".

```
SELECT ?name WHERE {  
  ?x vocab:eps_employee_NAME ?name .  
  ?x vocab:eps_emp_dept ?y .  
  ?y vocab:eps_department_ID "1038032"  
}
```

Results:

SPARQL results:

name
"张三"
"李四"
"王五"
"钱六"

知识图谱构建—DB转RDF

➤ RDF数据修改

● 添加关系

```
#n:m relationship of employee and organization
map:eps_emp_org a d2rq:PropertyBridge;
    d2rq:belongsToClassMap map:eps_employee;
    d2rq:property vocab:eps_emp_org;
    d2rq:refersToClassMap map:eps_organization;
    d2rq:join "eps_employee.ORG_ID => eps_organization.ID";
```

● 添加实体，并添加相关属性

```
# Table eps_job
map:eps_job a d2rq:ClassMap;
    d2rq:dataStorage map:database;
    d2rq:uriPattern "eps_job";
    d2rq:class vocab:eps_job;
    d2rq:classDefinitionLabel "eps_job";
map:eps_job_name a d2rq:PropertyBridge;
    d2rq:belongsToClassMap map:eps_job;
    d2rq:property vocab:name;
    d2rq:constantValue "job";
```

添加job类，并添加name属性

Property	Value

知识图谱构建—可视化编辑软件

➤ RDF数据查询

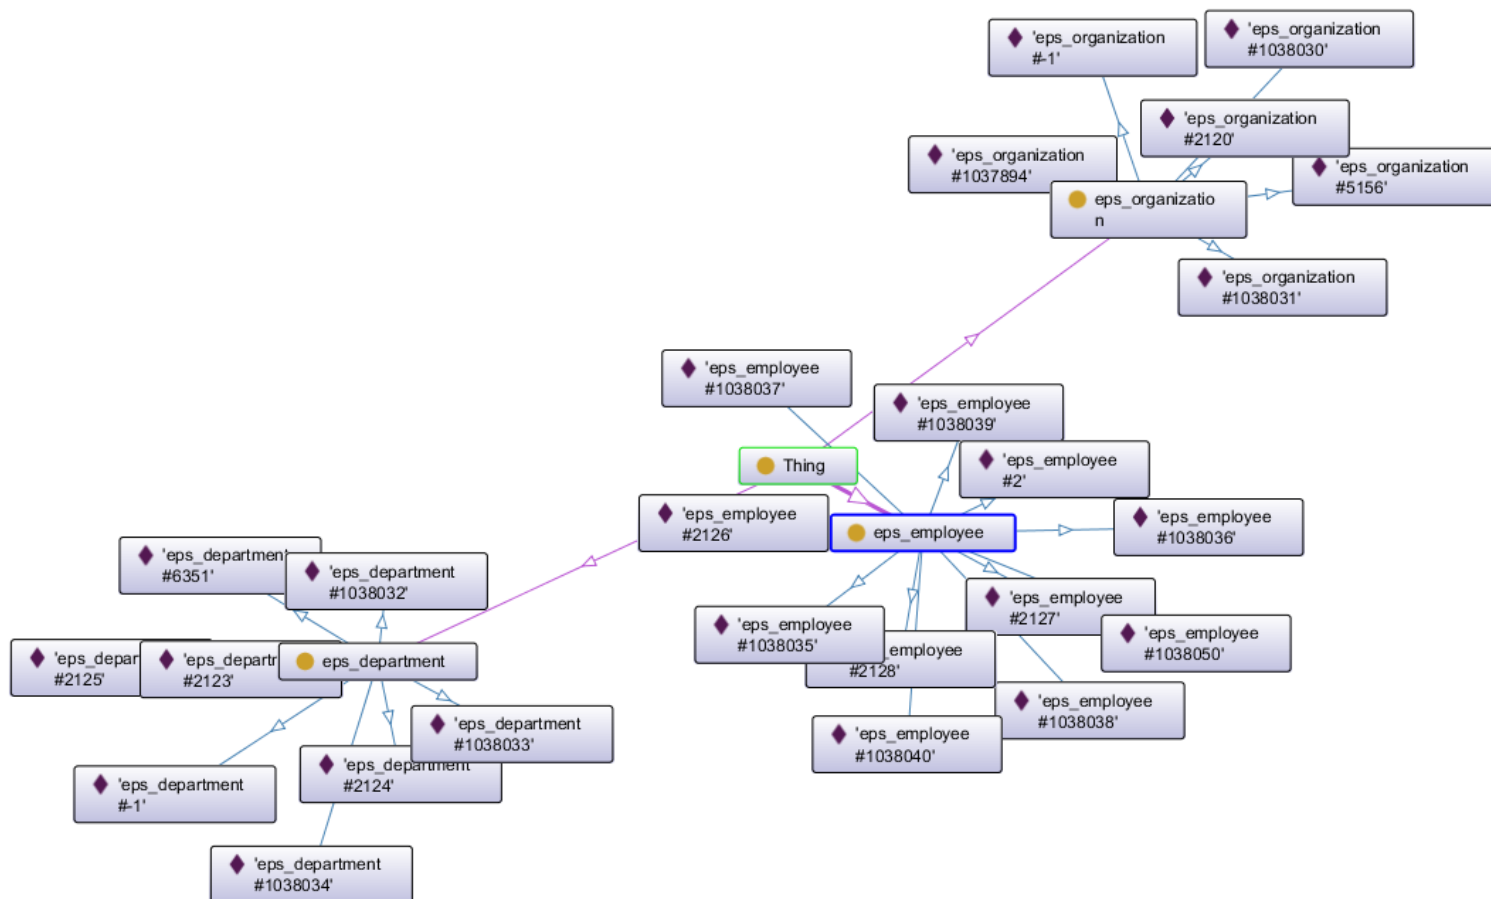

- Protégé:开源
- Isaviz:开源
- Altova SchemaAgent (x64)/ Altova SemanticWorks® 2010 : 收费

Site:<http://d2rq.org/jena>

知识图谱存储—RDF存储

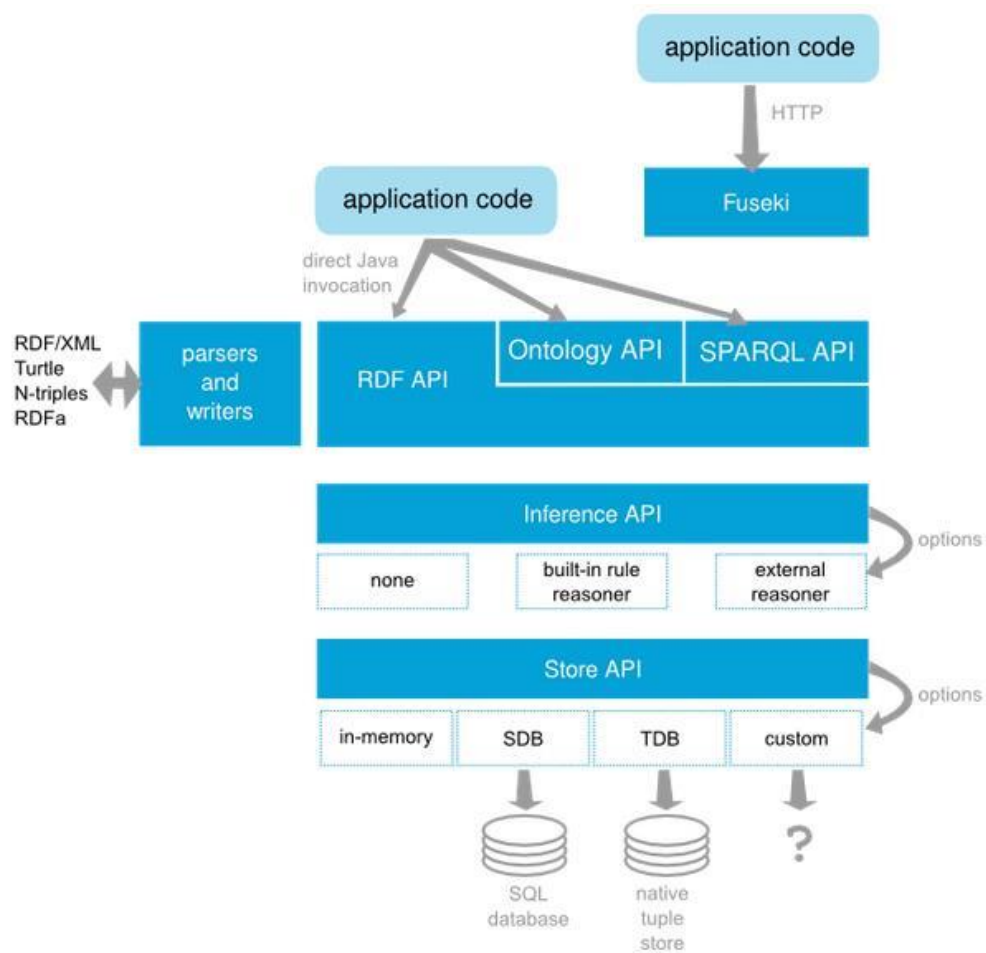

➤ RDF数据转成物理RDF

```
dump-rdf -f N-TRIPLE -b http://localhost:2020/ -m mapping-iswc.ttl -o iswc.nt
```

知识图谱存储—RDF存储

➤ RDF数据存储

知识图谱存储—RDF存储

➤ RDF数据存储

- Jena支持单机数据库

TDB—Jena自己

SDB Databases Supported

Product	Version
Oracle 10g	Including OracleXE
Microsoft SQL Server 2005	Including MS SQL Express
DB2 9	Including DB2 9 Express
PostgreSQL	v8.2
MySQL	v5.0.22
Apache Derby	v10.2.2.0
H2	1.0.71
HSQLDB	1.8.0

- Jena支持分布式数据库

Jena-hbase: A Distributed, Scalable and Efficient RDF Triple Store

知识图谱存储—RDF存储

➤ RDF数据存储

● Neo4j—图数据库

1. Neo4J支持RDF，SPARQL等扩展，[sparql-plugin](#)
2. 数十亿的节点数

知识图谱查询—D2R虚拟查询

➤ RDF数据查询

- Jena

Using D2RQ with Jena's Model API

Using D2RQ with Jena's Graph API

Executing SPARQL queries against a ModelD2RQ

- Http&&D2R

Site:<http://d2rq.org/jena>

知识图谱查询—D2R虚拟查询

➤ RDF数据查询

● Jena
